

What is dBrain?

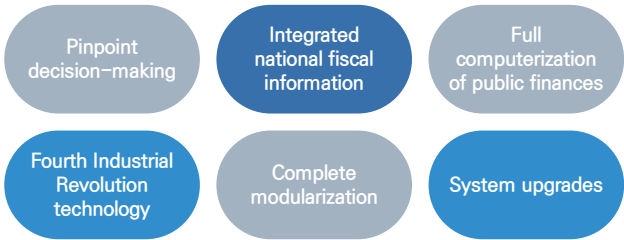

“Managing the entire life cycle of national fiscal services”

dBrain is a fiscal information management system that computerizes overall national public finance processes such as budget formulation and execution, treasury operations and payments, management of national property, settlement of government accounts, and performance evaluations. About 16,000 persons a day connect to the system to engage in computerized processing of fiscal matters, such as the 129 million funds transfers worth approximately KRW 2.39 quadrillion a year.

Next-generation dBrain

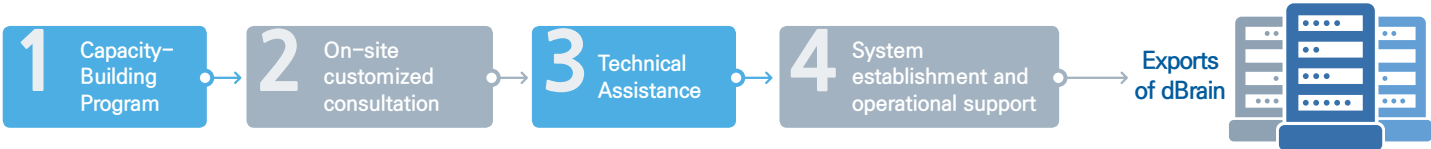

Next-generation dBrain, a future-oriented budget accounting system designed to implement fiscal innovation, will be built by 2021. Going beyond a simple focus on functionality and integrated fiscal management, the advanced system will promote transparency, intelligent fiscal policies, efficiency in fiscal matters, and sharing of information for public benefit, all while strengthening the analytic and application system across fiscal matters.

International cooperation

International cooperation projects

Roadmap for international cooperation

1. Capacity-Building Program

	Introductory courses	Basic level courses	Advanced courses
Frequency	On demand	Once per year	Once per year
Content	– Introduction to dBrain – Introduction to KPFIS – KPFIS' international cooperation projects	– Basics of dBrain – Korea's fiscal system – Latest ICT trends by theme – Introduction to current systems of user countries	– In-depth study of dBrain – Introduction to fiscal system of the specific country that will make use of dBrain and implications of Korea's experience – Latest ICT trends by theme – Sharing and discussion of selected issues

2. On-site customized consultation

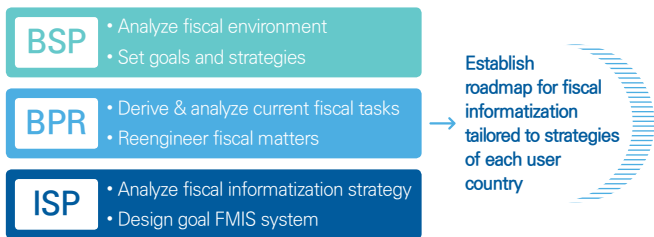

KPFIS offers consultation on fiscal information systems tailored to selected countries of those participating in basic and advanced levels of the capacity-building program. KPFIS visits and shares Korea's experience with each user country after analyzing the characteristics of their national fiscal system and institutions.

Case STUDY

KPFIS visited and provided customized consultation to five member countries of the World Bank that completed basic and advanced levels of the capacity-building program (Vietnam, India, Bhutan, Hungary, North Macedonia). Topics included cyber security, national funds management, causative acts, and the fiscal statistics system.

3. Technical Assistance

KPFIS organizes a consulting team designed for the needs of each user country after ascertaining its needs and preparing methods to raise funds. KPFIS sets goals and strategy through analysis of the financial management information system in each user country and redesigns its overall fiscal management system.

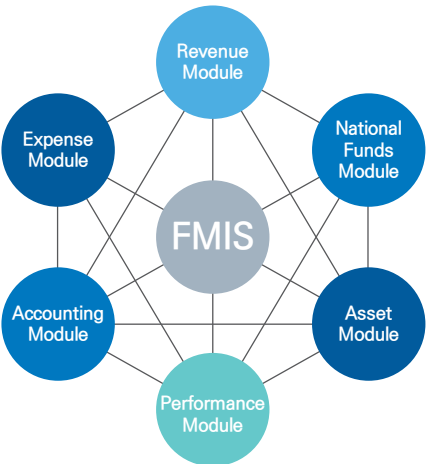

4. System establishment and operational support

KPFIS establishes strategy and plans to build a financial management information system that is in line with the fiscal policies of the user country and provides support with system buildup. KPFIS provides support for change, operations and quality management, to ensure operational stability once the system is completed.

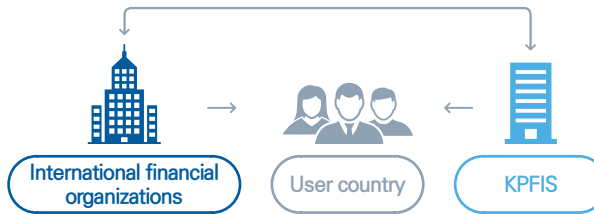

5. Exports of dBrain

The KPFIS system, dBrain, is exported after customization to the needs of each user country. After establishing next-generation dBrain, modules are selected according to user country need and then installed to ensure efficient operation.

Cooperation with International Financial Organizations

KPFIS enhances fiscal informatization in the international community through networking and partnership with international financial organizations. KPFIS adds to its partnerships through participation in conferences on financial management information systems and fiscal innovation, as well as collaborative capacity-building programs.

MOUs for International Cooperation

KPFIS strives towards enhancement of the world's fiscal information management systems by signing MOUs with various domestic and international financial and international cooperation institutions including the World Bank, the Inter-American Development Bank, the Asian Development Bank, ADB Institute, and the National Information Society Agency of Korea.

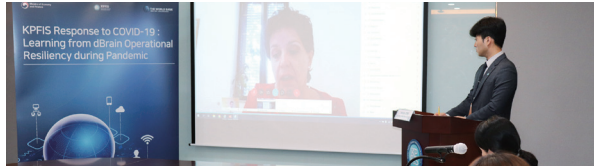

KSP(Knowledge Sharing Program)

KSPs are projects that identify policy suggestions and offer knowledge on economic development based on Korea's experience. To KSP partner countries, KPFIS offers a wealth of insight on its own experience building and running dBrain.

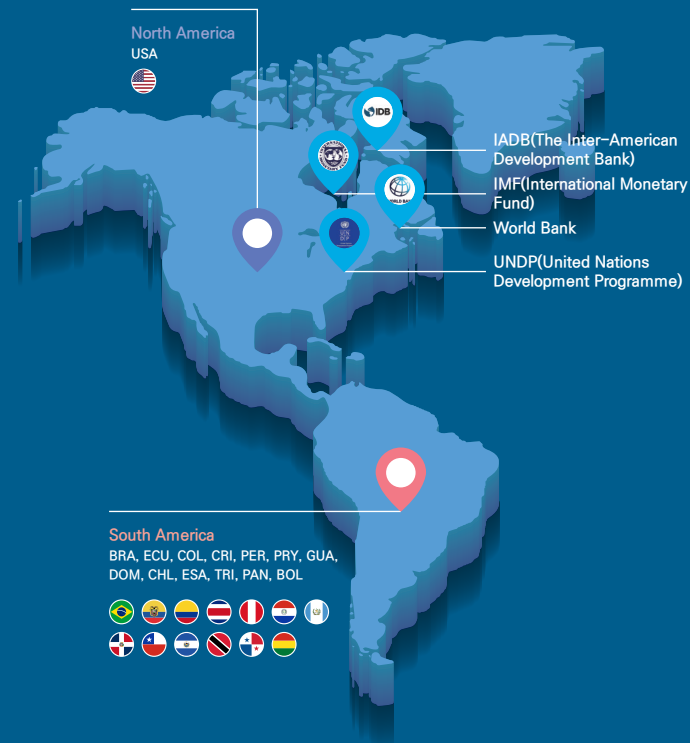

Sharing Korea's response to COVID-19 with the international community

KPFIS continues to run its fiscal information system securely amidst the COVID-19 pandemic, and has been able to share its experience and direction of business continuity with member countries of international finance organizations.

KPFIS presents a future strategy for fiscal informatization in the international community through a Financial Management Information System (FMIS) – strengthening leadership in public financial management!

Main Activities

- Fiscal management efficiency through dBrain
- Operation and management of Government Subsidies Integration Management System
- Support with establishment and implementation of fiscal policies through production of government finance statistics
- International cooperation in fiscal information management such as with its experience in fiscal informatization transfer and fiscal management system exports
- Operation of Cyber Security Center for fiscal management tasks

KPFIS

KPFIS (Korea Public Finance Information Service) was established in July 2016, and contributes to the development of national fiscal management through stable operation of the Digital Budget and Accounting System (dBrain) and support for the development of national fiscal policy. It also aims to contribute to fiscal management informatization in the world community through stronger international cooperation and exports of dBrain.

Global Network

Vision

A global finance platform builder leading in information security and fiscal innovation

Mission

Contribute to the government's public financing through computerized financial management
